Technical Note

The **Import Price Index (IPI)** is used primarily as an indicator to track the price trends of imported goods into Singapore. Prices of imports, valued at CIF terms (cost, insurance and freight) are obtained monthly from major importers. The weighting pattern of the index is derived from import statistics for 2023.

The **Export Price Index (EPI)** measures changes in the price of all exports of merchandise from Singapore, including re-exports. In general, prices are obtained from major exporters of the selected commodities. Prices used in the index computation, are the prices of goods that physically leave Singapore's main ports of export; also termed as Free on Board (FOB) prices. The weights of the index are derived from the distribution of export by commodity in 2023.

2023 Rebasing of the IPI and EPI
The Singapore Department of Statistics (DOS) has completed the rebasing of the Import and Export Price Indices from base year 2018 to 2023. The rebasing exercise is conducted periodically to ensure that the 'basket' of commodities remain relevant to changing imports and exports patterns.

Weights may not sum to 10,000 due to rounding

An Information Paper on the Rebasing of Import and Export Price Indices (2023=100) is available on the department's website at https://www.singstat.gov.sg/ppi#Producer-and-International-Trade-Prices.

Index Formula
The 2023-based series is compiled using the Laspeyres formula where the price and weight reference periods are aligned to the year 2023. The geometric mean formula has been adopted in the computation of unweighted elementary aggregate price indices. The arithmetic mean formula is applied in compiling indices at higher levels of aggregation where weights of specific sub-indices are available.

Measurement of Changes in Price Indices
Change over previous month compares the index of the month with that of the preceding month. Such comparisons measure the change in the price index between two consecutive months. They serve as useful short-term indicators of the price movements.

Change over same period of previous year measures change in the index over a twelve-month period. Such comparisons compare the movement in the price index between similar months in two consecutive years.

Linking the Old 2018-Based Price Index Series to the New 2023-Based Price Index Series

The IPI and EPI have been rebased from base year 2018 to base year 2023. To facilitate comparison of the historical price indices across base years, the old 2018-based series are linked to the new 2023-based series by re-scaling them via a Linked Coefficient. The Linked Coefficient is the ratio of the annual 2023-based index in 2023 to the annual 2018-based index in 2023.

Example: Linking the old Iron & Steel Index series for IPI prior to 2023, to the 2023-based Iron & Steel Index (2023=100)

1) Calculate the linked coefficient

Year	Iron & Steel Index (2018=100)	Iron & Steel Index (2023=100)	Linked Coefficient
2023	93.4	100.0	100.0 ÷ 93.4 = **1.071**

2) Re-scaling the old series to the 2023-based series using the Linked Coefficient

Year	Month	Iron & Steel Index (2018=100)	Iron & Steel Index (2023=100)
2021	Dec	84.0	84.0 x **1.071** = **90.0**
2022	Jan	85.6	85.6 x **1.071** = **91.7**

Linking Method for Maintaining the Old Index Reference Period

To continue the old 2018-based index series going forward in time, re-scale the new 2023-based index series to the old base year 2018 level, via a Linked Coefficient. The Linked Coefficient is the ratio of the annual 2018-based index in 2023 to the annual 2023-based index in 2023.

Example: Linking the new 2023-based Iron & Steel Index series for IPI to the 2018-based Iron & Steel Index (2018=100)

1) Calculate the linked coefficient

Year	Iron & Steel Index (2023=100)	Iron & Steel Index (2018=100)	Linked Coefficient
2023	100.0	93.4	93.4 ÷ 100.0 =**0.934**

2) Re-scaling the new series to the 2018-based series using the Linked Coefficient

Year	Month	Iron & Steel Index (2023=100)	Iron & Steel Index (2018=100)
2024	Jan	98.6	98.6 x **0.934** = **92.1**
2024	Feb	102.4	102.4 x **0.934** = **95.6**
